**COMPREHENSIVE,
RELIABLE TESTING FOR
CONTINUED
GOOD HEALTH**

At CANSCAN, we deliver patient friendly care, employing state of the art technology that ensure accurate results. In an effort to meet patient demand for comprehensive, essential diagnostic services, we expanded our services from specialized ultrasound imaging to multi-modality diagnostic capabilities.

Equipped with the most advanced equipment, we deliver reports of the highest quality. Individuals, corporates and insurance companies alike, benefit from our range of services that include preventive health check-up and master health check-up packages.

In order to provide superior customer experience, we have put together a team of qualified doctors as well as experienced staff and technicians. Apart from the presence of a full time Sonologist, our patients benefit from the expertise of consultants that include Pathologists, Radiologists and Cardiologists who review reports before they are issued.

Comprehensive services

We offer top of the line services that utilize advanced technology to ensure accurate results.

Ultrasound – Colour Doppler

Our Ultrasound – Colour Doppler unit (GE Voluson E8) generates images in 3D/4D that enables monitoring of normal pregnancies and the diagnosing of abnormalities with greater accuracy. In addition, expectant mothers can benefit from real time three dimensional images and views of their babies' in-utero.

Pathology Lab

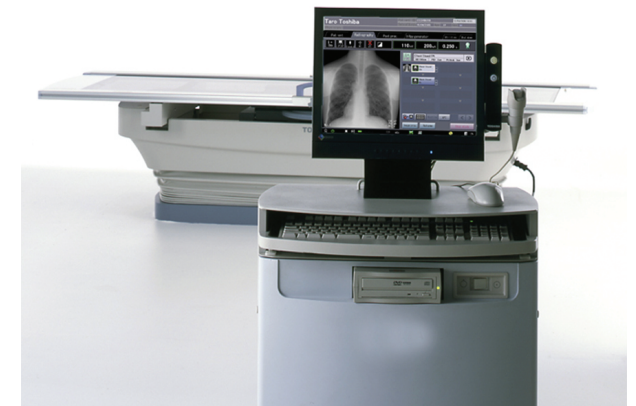

Equipped with computerized / automated analyzers, our laboratory offers several test packages/profiles for detection of lifestyle diseases such as Heart / Lipid profile, Diabetes profile, Renal profile, Liver function test, etc. Master/Executive health checkup package are also available. Please call us to avail our home sample collection service.

Prenatal Screening

In association with global industry leader Perkin Elmer, we offer First Trimester (FTS) and Second Trimester screening which follows the international guidelines established by FMF (Fetal Medical Foundation), UK. This helps early diagnosis of chromosomal defects and fetal abnormalities.

Advanced Digital X-Ray

The latest high frequency X-Ray equipment with Computerized Radiography (CR) provides the advantage of negligible skin dose (radiation safety to patients) and lower exposure time (excellent film quality), apart from enabling quick reporting by Radiologists.

The CANSCAN Advantage

- All essential diagnostic facilities housed under one roof.
- Accurate diagnosis and timely reporting. Established track record of 10 years in ultrasonography.
- Sound understanding of patient and doctor requirements.
- Equipped with advanced equipment, operated by experienced technicians and qualified doctors.
- Focus on affordable, high quality, patient - friendly care.
